Sprint Review Meeting

Andries Bingani

October 19, 2016

The sprint review meeting was conducted on the 9th of September. The four items on the sprint planning meeting were:

- Reverse geo coding

- Allow users to search other users

- Allow users to search events

- Allow users to follow and unfollow

- view user profile

- custom profile picture

- custom profile picture

The first three were demonstrated and they proved to be working fine. The last item was declared as unfinished and moved to spring review meeting two. Someone from the scrum development team suggested the use of a strong password. This was then added to the Product Backlog. The use of searching for an event and being able to remove an event was also suggested. This was also added to the Product Backlog.
